

# KOZY HEAT – TWO HARBORS

## 2. HORIZONTAL TERMINATIONS:

Frame a 12 1/2" high (H) x 10 7/8" wide (W) opening on the exterior wall for the chimney termination. This opening size includes the required 3" clearance at the top of the vent pipe and 1" clearance at the sides and bottom of the vent pipe.

### STRAIGHT WALL / CORNER INSTALLATIONS:

To achieve the minimum horizontal venting requirements, for **RIGID PIPE APPLICATIONS**, a minimum of 41 1/4" (A) to the top of the vent pipe and 44 1/4" (B) to the top of the framed opening from the floor or hearth the fireplace is setting on is required. See Figure 7A.

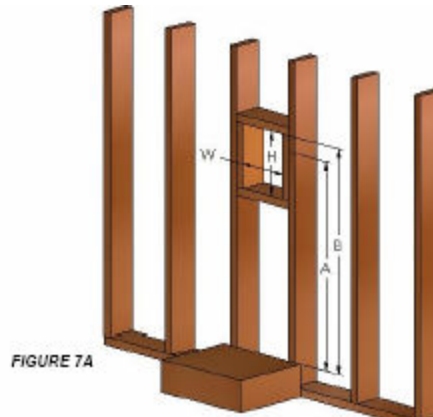

FIGURE 7A

3. **VERTICAL TERMINATIONS:** Follow vent pipe manufacturer's installation instructions for vertical terminations. A minimum 1" clearance on all sides of vertical vent pipe sections must be maintained.

The horizontal vent heat shield is not used for vertical venting configurations.

**CAUTION: COLD AIR TRANSFER AREA. THE SURROUNDING CHASE OF THE FIREPLACE MUST COMPLY WITH ALL CLEARANCES AS OUTLINED IN THIS MANUAL AND BE CONSTRUCTED IN COMPLIANCE WITH LOCAL BUILDING CODES. OUTSIDE WALLS SHOULD BE INSULATED TO PREVENT COLD AIR FROM ENTERING THE ROOM.**

**NOTE:** Due to high temperatures, this fireplace should be located out of traffic areas and away from furniture and draperies.

4. Build the hearth to the desired size and height. If a hearth extension is desired, combustible material may be used.
5. Rough in the wall enclosure. Figure 7B.
- 6.

**IMPORTANT:** Framing dimensions should allow for wall covering thickness and fireplace facing materials. Adjust rough opening size as necessary to maintain at least the minimum clearance requirements.

**MINIMUM FINISHED OPENING DIMENSIONS** (Wall covering / facing materials included):

32 5/8" high x 19 3/4" wide x 14 7/8" deep\*

\*1/2" clearance at the back & sides of the fireplace must be maintained. Refer to Figures 3B & 3C, page #3.

**IMPORTANT: PLACE HEADER IN THE UP POSITION TO MAINTAIN PROPER CLEARANCE FROM VENT SYSTEM TO COMBUSTIBLES.**
